

B1
CONT'D plurality of information processing devices, identification data for identifying information to be transmitted in response to said event, and transmission destination data indicative of a transmission destination of said information to be transmitted;

detection means for detecting a content of said event; and

transmission means for transmitting, via said transmission media, said information identified by said identification data corresponding to said content of said event detected by said detection means to an information processing device that is designated by said transmission destination data corresponding to said event.

12. The information processing device as claimed in claim 11, wherein said event is a transmission of information via said transmission media from at least one of said other information processing devices to another of said plurality of information processing devices, and wherein said transmission means transmits information associated with said information transmitted.

13. The information processing device as claimed in claim 11, wherein said event is a transmission of information via said transmission media from at least one of said at least one other information processing devices to said information processing device and wherein said transmission means

B1 transmits information associated with said information
CONTD transmitted.

14. The information processing device as claimed in
claim 11, wherein said event is a modification of information
handled by said at least one information processing device.

15. The information processing device as claimed in 14,
wherein said information handled by said at least one
information processing device is information stored therein.

16. The information processing device as claimed in
claim 11, wherein said destination of said information to be
transmitted is at least one of said plurality of other
information processing devices interconnected with said at
least one information processing device.

17. The information processing device as claimed in
claim 11, wherein said event is a transmission of information
from at least one of said plurality of other information
processing devices to said at least one information processing
device and said other information processing devices other
than said at least one of said other information processing
devices.

18. The information processing device as claimed in
claim 11, wherein said information handled by said at least
one information processing device is information indicative of

B) a current situation of a facility which performs a
CONT'D predetermined process, and wherein said information to be
transmitted from said transmission means is transmitted to a
controller which uses said information transmitted and
controls the predetermined process of said facility.

19. The information processing device as claimed in
claim 11, further comprising:

means for deciding whether said event detected
relates to said information handled by said at least one
information processing device;

said transmission means, when said event is judged
as relating to said information, transmitting said information
identified by said identification data.

20. An information processing method in an information
processing device interconnected via transmission media with a
plurality of other information processing devices, said
information processing device including storage means for
storing, in a correlated manner with one another, an event
indicative of a change of situation relating to information
handled by at least one information processing device of said
plurality of information processing devices and other
information processing devices of said plurality information
processing devices, identification data for identifying
information to be transmitted in response to said event, and
transmission destination data indicative of a transmission

B1 destination of said information to be transmitted, said
information processing method comprising:
detecting a content of said event; and
transmitting, via said transmission media, said
information identified by said identification data
corresponding to said content of said event detected by said
detection means to an information processing device that is
designated by said transmission destination data corresponding
to said event.

21. The information processing method as claimed in
claim 20, wherein said event is a transmission of information
via said transmission media from at least one of said other
information processing devices to another of said plurality of
information processing devices, and wherein said transmitting
step includes transmitting information associated with said
information transmitted.

22. The information processing method as claimed in
claim 20, wherein said event is a transmission of information
via said transmission media from at least one of said other
information processing devices to said at least one
information processing device and wherein said transmitting
step transmitting information associated with said information
transmitted.

B1
CONT'D 23. The information processing method as claimed in claim 20, wherein said event is a modification of information handled by said at least one information processing device.

24. The information processing method as claimed in claim 23, wherein said information handled by said at least one information processing device is information stored therein.

25. The information processing method as claimed in claim 20, wherein said destination of said information to be transmitted is at least one of said plurality of other information processing devices interconnected with said at least one information processing device.

26. The information processing method as claimed in claim 20, wherein said event is a transmission of information from at least one of said plurality of other information processing devices to said at least one information processing device and said other information processing devices other than said at least one of said other information processing devices.

27. The information processing method as claimed in claim 20, wherein said information handled by said at least one information processing device is information indicative of a current situation of a facility which performs a predetermined process, and wherein said information to be
